Projects

AI-Assisted Resume Portfolio Generator

Python, Google Gemini API, HTML, CSS, JS

- Developed an AI-assisted application that converts unstructured resume information into structured professional profile data.
- Used Google Gemini AI to extract and organize resume information into structured JSON.
- Built a portfolio/resume generation workflow for creating professional career profiles.
- Integrated frontend and backend components to process user-provided resume information.

Fake News Generator

Python, Flask, HTML, CSS, JavaScript

- Developed a web application that dynamically generates fictional news sentences using predefined subjects, actions and locations.
- Built a Flask backend with a frontend interface for generating news through an API endpoint.
- Implemented JavaScript fetch() integration to communicate with the Flask backend.

Student Management System

Python, OOP, MySQL

- Developed a student management application using Python and object-oriented programming concepts.
- Implemented classes, properties, getters/setters, GPA validation, and private attributes.
- Worked with MySQL for storing and managing student-related data.

DBMS / Student Database Project

Python, MySQL, SQL

- Built a database-driven project using Python and MySQL, implementing operations via mysql.connector.
- Worked with DDL, DML, joins, views, grouping, filtering and database normalization concepts.

Focus Flow

HTML, CSS, JavaScript

- Developed a productivity-focused web application implementing an interactive timer/productivity workflow.
- Designed a responsive and user-friendly interface with JS application logic.
